Dhanesh Phulphagar

Full-Stack Software Engineer | Python, TypeScript, PostgreSQL, GTM Engineering

dhaneshacad@gmail.com github.com/darayn linkedin.com/in/dhanesh-phulphagar dhaneshphulphagar.com

SUMMARY

Full-Stack Software Engineer with 4+ years of experience building production web platforms, checkout systems, ERP workflows, CI/CD automation, and internal AI tooling. Strong in GTM and growth engineering: checkout, payments, conversion, fraud flagging, reconciliation, and revenue-side automation for high-traffic e-commerce products.

Target roles: Full-Stack Engineer, Backend Engineer, Software Engineer, Platform Engineer, E-commerce Engineer

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, C++, HTML, CSS
Frontend: React, Next.js, Vue.js, Nuxt.js, Svelte, Tailwind CSS, shadcn/ui, Pinia
Backend: Flask, FastAPI, Django, Django REST Framework, Node.js, Express.js, Odoo, SQLAlchemy
Databases: PostgreSQL, PostgreSQL full-text search, pgvector, MongoDB, Redis, Supabase
Cloud and DevOps: Ansible, CI/CD, PM2, Git, Vercel, AWS S3, Cloudflare R2, Fail2ban, Grafana, Prometheus
Integrations: REST APIs, OAuth 2.0, WebAuthn, Stripe, Razorpay, Cashfree, CCAvenue, OpenAI API, logistics APIs

PROFESSIONAL EXPERIENCE

Marchtee.com — Sep 2022 – Present

Core Contributor, Full-Stack Software Engineer | E-commerce, Checkout, ERP, Infrastructure

Backend Platform Python · Flask · SQLAlchemy · PostgreSQL · Redis

Rebuilt authentication and authorization from scratch, including RBAC, multi-device sessions, OAuth 2.0, WebAuthn, passwordless OTP, and secure customer account flows.
Migrated CMS content and assets from code-managed flows to database-backed workflows with Cloudflare R2/S3 storage, improving maintainability and release safety.
Improved page load performance by 50% through Redis caching, namespace isolation, PostgreSQL full-text search, optimized collection queries, and query batching.
Built payment gateway analytics, COD/fraud/address validation workflows, returns reconciliation, and a rule-based pricing engine for product, customer, campaign, and order-level decisions.
Designed a referral system with unique links, attribution, customer credits, tiered rewards, and safeguards for reliable reward calculation.

Checkout and Frontend Nuxt.js · Vue.js · Pinia · PM2

Built single-page checkout for guest and authenticated users with UPI, saved cards, Cashfree, CCAvenue, and persistent Pinia state; reduced checkout time by 90% and improved conversion by up to 40%.
Scaled international checkout to 7+ countries with localized currency, tax, language, and logistics integrations; contributed to a 25% increase in international orders.

ERP and Business Operations Python · Odoo v14 to v16 · Custom Modules

Led major Odoo v14 to v16 upgrade work, including custom module migration, ORM compatibility fixes, data integrity checks, and production rollout support.
Built 10+ custom ERP models for returns, exchanges, shipping services, stock labels, delivery notes, inventory, invoicing, purchases, manufacturing, and reporting.

Infrastructure and Internal Tools Ansible · FastAPI · Grafana · Prometheus

Replaced legacy Fabric deployment scripts with Ansible-based CI/CD for 10+ daily on-demand deployments, bare-metal provisioning, structured logging, and zero-downtime rolling updates.
Automated PostgreSQL backups to Cloudflare R2 with scheduled retention policies; implemented Grafana and Prometheus dashboards, alerting, and query optimization workflows.
Built Kavinath inside the shop Flask application using Pi-based harnessing, structured tool calls, and evaluations for customer-support actions including order edits, shipping updates, exchanges, and returns.

Cognizant — February 2021 – June 2022

Programmer Analyst, ServiceNow Developer

Developed ServiceNow applications, REST integrations, and workflow automation; collaborated on Walmart mainframe migration work and built a COWIN-integrated vaccination survey. ServiceNow CSA and CAD certified.

CDAC — January 2020 – April 2020

Research Intern — Text-to-Speech

Reimplemented Mozilla TTS for the Odia language with data preprocessing and implemented DeepMind WaveRNN in PyTorch as a neural vocoder.

PROJECTS

Waltra

IoT · Raspberry Pi · SCADA · Time-Series Data · Mobile App · Web Dashboards

Independently built an IoT-enabled water infrastructure monitoring platform for real-time tank, pump, flow, and device-health visibility across multiple sites.
Integrated legacy SCADA systems and Raspberry Pi field devices into a modern backend, replacing manual and cron-based syncs with near real-time ingestion and operational dashboards.
Designed time-series pipelines and event detection for low-water, overflow, pump activity, and unreliable field-network scenarios, reducing dependency on manual checks.

Foodcription

Next.js · TypeScript · Supabase · PostgreSQL · Stripe · Razorpay · Vercel · Tailwind · shadcn — foodcription.com

Sole engineer for a subscription food ordering platform covering authentication, data modeling, order management, payment integration, deployment, and production support.
Implemented reversible migrations, feature flags, Stripe/Razorpay payment flows, and idempotent order creation; processed 100+ orders in first 30 days.

EDUCATION

Savitribai Phule Pune University

Bachelor of Engineering in Information Technology, 2017 – 2021
