Dhanesh Phulphagar

Full-Stack Software Engineer | Python, TypeScript, PostgreSQL | Remote and Onsite Ready

dhaneshacad@gmail.com github.com/darayn linkedin.com/in/dhanesh-phulphagar dhaneshphulphagar.com Open to relocate: SG/UAE/EU/AU/US Visa sponsorship required

SUMMARY

Full-Stack Software Engineer with 4+ years of experience building production web platforms, checkout systems, ERP workflows, CI/CD automation, and internal AI tooling. Experienced in GTM and growth engineering: checkout, payments, conversion, fraud flagging, reconciliation, international e-commerce, observability, and full-cycle product delivery.

Target roles: Full-Stack Engineer, Backend Engineer, Software Engineer, Platform Engineer, Product Engineer, E-commerce Engineer

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, C++, HTML, CSS
Frontend: React, Next.js, Vue.js, Nuxt.js, Svelte, Tailwind CSS, shadcn/ui, Pinia
Backend: Flask, FastAPI, Django, Django REST Framework, Node.js, Express.js, Odoo, SQLAlchemy
Databases: PostgreSQL, PostgreSQL full-text search, pgvector, MongoDB, Redis, Supabase
Cloud and DevOps: Ansible, CI/CD, PM2, Git, Linux, Vercel, AWS S3, Cloudflare R2, Fail2ban, Grafana, Prometheus
Integrations: REST APIs, OAuth 2.0, WebAuthn, Stripe, Razorpay, Cashfree, CCAvenue, OpenAI API, DHL, Aramex, India Post

PROFESSIONAL EXPERIENCE

Marchtee.com — Sep 2022 - Present

Core Contributor, Full-Stack Software Engineer | International E-commerce, Checkout, ERP, Infrastructure

Backend Platform Python | Flask | SQLAlchemy | PostgreSQL | Redis

Rebuilt secure authentication and authorization from scratch, including RBAC, multi-device sessions, OAuth 2.0, WebAuthn, passwordless OTP, and customer account flows.
Migrated CMS content and assets from code-managed flows to database-backed workflows with Cloudflare R2/S3 object storage, improving maintainability and release safety.
Improved page load performance by 50% through Redis caching, namespace isolation, PostgreSQL full-text search, optimized collection queries, and query batching.
Built payment analytics, fraud and address validation workflows, returns reconciliation, and a rule-based pricing engine for product, customer, campaign, and order-level decisions.
Designed referral tooling with unique links, attribution, customer credits, tiered rewards, and safeguards for reliable reward calculation.

Checkout and Frontend Nuxt.js | Vue.js | Pinia | PM2

Built single-page checkout for guest and authenticated users with UPI, saved cards, Cashfree, CCAvenue, and persistent Pinia state; reduced checkout time by 90% and improved conversion by up to 40%.
Scaled international checkout to 7+ countries with localized currency, tax, language, and logistics integrations; contributed to a 25% increase in international orders.

ERP and Business Operations Python | Odoo v14 to v16 | Custom Modules

Led major Odoo v14 to v16 upgrade work, including custom module migration, ORM compatibility fixes, data integrity checks, and production rollout support.
Built 10+ custom ERP models for returns, exchanges, shipping services, stock labels, delivery notes, inventory, invoicing, procurement, manufacturing, and reporting.

Infrastructure and Internal Tools Ansible | FastAPI | Grafana | Prometheus | LLM

Replaced legacy Fabric deployment scripts with Ansible-based CI/CD for 10+ daily on-demand deployments, Linux server provisioning, structured logging, and zero-downtime rolling updates.
Automated PostgreSQL backups to Cloudflare R2 with scheduled retention policies; implemented Grafana and Prometheus dashboards, alerting, and query optimization workflows.
Built an internal LLM-powered operations assistant with a FastAPI backend and deployed self-hosted warehouse surveillance with automated backups across 3 locations.

Cognizant — February 2021 - June 2022

Programmer Analyst, ServiceNow Developer

Developed ServiceNow applications, REST integrations, and workflow automation for enterprise clients; collaborated on Walmart mainframe migration work. ServiceNow CSA and CAD certified.

CDAC — January 2020 - April 2020

Research Intern - Text-to-Speech

Reimplemented Mozilla TTS for the Odia language with data preprocessing and implemented DeepMind WaveRNN in PyTorch as a neural vocoder.

PROJECTS

Waltra

IoT | Raspberry Pi | SCADA | Time-Series Data | Mobile App | Web Dashboards

Independently built an IoT-enabled water infrastructure monitoring platform for real-time tank, pump, flow, and device-health visibility across multiple sites.
Integrated legacy SCADA systems and Raspberry Pi field devices into a modern backend, replacing manual and cron-based syncs with near real-time ingestion and operational dashboards.
Designed time-series pipelines and event detection for low-water, overflow, pump activity, and unreliable field-network scenarios, reducing dependency on manual checks.

Foodcription

Next.js | TypeScript | Supabase | PostgreSQL | Stripe | Razorpay | Vercel | Tailwind | shadcn - foodcription.com

Sole engineer for a subscription food ordering platform covering authentication, data modelling, order management, payment integration, deployment, and production support.
Implemented reversible migrations, feature flags, Stripe/Razorpay payment flows, and idempotent order creation; processed 100+ orders in first 30 days.

EDUCATION

Savitribai Phule Pune University

Bachelor of Engineering in Information Technology, 2017 - 2021
